

AbstractApparatus for Playing a Game and Method of Use Thereof

Apparatus is provided for playing a game. The apparatus includes a play base having one or more magnets provided thereon and at least a first magnetic member located a pre-determined spaced distance above an upper surface of said play base and movable relative thereto. The movement or the result of the movement of the first magnetic member relative to the play base relates to one or more pre-determined criteria for allowing further playing of the game according to a set of rules.
